

Hurricane Larry continues to lumber through the Atlantic and may sideswipe Bermuda late Wednesday into Thursday.

Meanwhile, residents of Newfoundland could face a hefty dose of tropical trouble as the storm approaches this weekend. Wind, rain, and surge are expected as Larry barrels northward while maintaining hurricane-equivalent strength. Annular cyclones, like Larry, often don't exhibit the pinwheel appearance of some cyclones with concentric spiral rain bands. Instead, they're more reminiscent of an atmospheric buzz saw.
